

SCIENCE EDITORS NETWORK

Grant Writing • Manuscripts • Project Planning • Scientific Consulting

February 18, 2015

Human Resources
Pear Therapeutics
Boston, Massachusetts

Dear Pear Therapeutics team,

I am writing in response to the job offer you posted for a Grant Writer to help Pear Therapeutics recruit funding and prepare scientific manuscripts. I am the founder and Chief Science Writer of a scientific consulting group, SEN, that provides writing services to scientists in academia and biotech. I wonder whether Pear Therapeutics would be interested in contracting out your grant and scientific writing to us.

Science Editors Network (SEN) is a dynamic organization of PhD scientists with outstanding communication skills who have 10 years of experience writing scientific manuscripts in a team environment. SEN currently has writers with training in immunology, neurobiology and behavioral science, stem cell research, molecular biology, physics and public health. We have experience working with individual faculty at universities like Harvard and Stanford, with academic medical centers and departments within them, and with biotech companies at different stages of development. We can provide anything from basic editing services to comprehensive grant writing to project management, consulting, and concept development.

Based on my experience with similar clients, I think that a partnership between Pear Therapeutics and SEN could be a very good fit. SEN matches each project with a team of writers that have background and interest, giving you access to a much broader range of expertise than you would find in one individual. Our writers are extremely flexible, collaborative, and used to working in fast-paced environments. We build long-term relationships with our clients and are committed to their success. We know the funding environment extremely well, and we have unique insights about how the process works at many different government and private funding organizations. As an added benefit, SEN provides our writers with career development opportunities and a community of peers that keeps us motivated and engaged in our profession. By contracting SEN, Pear can have access to an elite group of scientific consultants on an as-needed basis.

I am enclosing a brief overview of SEN's services for your perusal. I would be delighted to talk to you, in person or by phone, to discuss how SEN could support Pear's funding and grant writing needs. We have editors in Boston and in the Bay Area who are available to develop personal relationships with your team, and we are open to customizing our services to your needs.

I look forward to hearing from you and potentially working with you in the future.

Warm regards,

Asha Nigh, PhD
Chief Science Writer
Science Editors Network
